

Building Sustainable Future: The Role of Circular Economy, Bioeconomy, and Environmental Education in Shaping Our Planet's Tomorrow

Exploring the impact of circular economy, bioeconomy & environmental education in building a sustainable future. Join the conversation on shaping a greener planet!"

Join us to explore how the circular economy, bioeconomy, and environmental education drive sustainability. Engage with experts, share ideas, and discover innovative solutions for a greener future!

The event will be hosted by CluBE in regionals unit of the Region of Western Macedonia (WM). Therefore, there will be partnerships with local public bodies (such as the Municipality of Kozani, the Municipality of Grevena, the Municipality of Eordia, etc.), but also with local schools, traditional associations. In each event, environmental awareness actions will be carried out to protect the environment and to raise awareness of the circular economy and bioeconomy. The goal is to foster a more competitive, sustainable and resilient future. Our vision is to divide the event into individual themes to present the theme holistically, from different perspectives, involving creative expression through the creation and exhibition of a product and arts such as dance.

- Action A: On World Environment Day, CluBE will organize an open event, in cooperation with municipalities and other institutions, for all citizens with the aim of environmental awareness. Environmental games will be hosted in each city and will be engaged by each citizen. An exhibition of products from the circular economy and bioeconomy will be given prominent green entrepreneurship.
- Action B: CluBE implements educational programs in schools throughout five large cities of WM. An open event will take place, which will give students the opportunity to put forward their proposals for a sustainable planet, using the circular economy and involving local stakeholders, citizens and young people to raise awareness through youth actions and to co-create solutions for a sustainable planet.
- Action C: A local traditional association will organize the national dance festival. As part of this festival, CluBE will be running an environmental education workshop for primary school children. An ecotherapy workshop would include an interactive exploration of the relationship between humans and nature, highlighting how this connection is expressed through dance. An exhibition of products from the circular economy will be on show to students as part of this workshop.
- Action D: Focusing on the new generation, CluBE in collaboration with a local kindergarten will carry out an environmental awareness and education action in a forest, which is located very close to the Kozani city. The action will include virtual reality and outdoor games. Also, there will be a forest educational walk and exploration in the forest, that can be bioeconomy steward. The aim is to bring young children in contact with nature, to cultivate a culture of respect for the environment with less pollution and less negative impact on the environment and nature, imported raw materials.
