

Save Water Challenge for high schoolers in Kankaanpää, Finland

The Sustainability Team in Kankaanpään yhteislyseo challenges the students in our school to save water and film their best water-saving tips for everyone to see. The aim of this water-saving challenge is to make high schooler's think of ways of saving water and to make them aware of the limitations of water resources. The Sustainability Team in our school will give students and staff members information about saving water. There will be water-saving tips on the info screens in our school during the week as well.

The challenge itself is that students will come up with a way to save water and either film or photograph their act of saving water. The best tips will be shared on our school's social media and the students who come up with the best tips will be awarded by the Sustainability Team.
