

- June 2025 - Art'ificial - marine litter

Praia Fluvial do Rebolim
- Coimbra, Portugal -

Art'ificial it's an event that consists of collecting and monitoring waste on a beach (sea or river) and communicating and presenting the results. With the collected waste, a "work of art" will be created to be displayed at the collection site, raising awareness in the community about pollution prevention.

Art'ificial - will help to understand the origins of waste, as well as possible alternatives, through the creation of a "work of art" made with the collected waste, appealing to the recovery and reuse of materials.

Objectives

- Know the composition of waste, origins, causes and consequences
- Develop an active learning project
- Induce intervention/action strategies in the school and community
- Helping to solve the problem of marine litter also contributes to preserving the biodiversity of the largest biome on Earth – the Ocean, by appealing to the recovery and reuse of materials, contributing to the circular economy.
- Create a "Work of Art" with the rubbish collected on the beach and make this work a symbol of awareness of the need to prevent waste production and promote the circular economy.
